Synopsis:

Managing Program Risks – Is this same as managing Project risks?

While managing risks whether at project or program level have similar tools and techniques, the application of these techniques differs in managing programs and its constituent projects.

Impact of a project risk could be different at project and program level and hence, we need two dimensional (project as well as program) assessment of project risks.

This session will cover key differences and similarities in managing project and program risks, using examples from large global programs and need for managing them at both levels.
